PROFESSIONAL SUMMARY

Data Analyst with hands-on experience across Python, SQL, PostgreSQL, Power BI, and FastAPI, built through a supply chain intelligence internship and two end-to-end analytics projects spanning 1,000+ records. Designs ETL pipelines and PostgreSQL schemas, builds and documents REST APIs, and delivers Power BI dashboards that turn raw data into decisions.

Core Competencies: Python (Pandas, NumPy) · SQL & PostgreSQL · ETL Pipeline Design · Power BI & Data Visualization · FastAPI & REST APIs · Data Cleaning & Validation · KPI Analysis · Stakeholder Communication

TECHNICAL SKILLS

Programming: Python

Databases: SQL, PostgreSQL

Data Analytics: Pandas, NumPy, ETL, Data Cleaning, Data Transformation, Statistical Analysis

Visualization: Power BI, Matplotlib, Seaborn, Excel (PivotTables, VLOOKUP)

Backend: FastAPI, REST APIs, Swagger/OpenAPI

Tools: Microsoft Excel, Git, GitHub, Jupyter Notebook, VS Code, Render

Soft Skills: Cross-functional Collaboration, Stakeholder Communication, Problem-Solving, Attention to Detail

EXPERIENCE

Data Analyst Intern — Skillvance Technologies

Remote | Project: SupplyMind — AI-Powered Supply Chain Intelligence & Decision Support Platform
May 2026 – Jul 2026

- Designed PostgreSQL database schemas and built Python/Pandas ETL pipelines to clean, transform, and load multi-source supply chain datasets, cutting manual data-prep effort by an estimated 30–40% for downstream reporting.
- Built and tested 10+ REST API endpoints with FastAPI to connect backend, database, and frontend modules, enabling reliable end-to-end data flow across the platform.
- Developed an AI-powered Response Planning Engine to flag supplier delays, demand spikes, stockout risks, and lead-time changes, supporting faster operational decision-making across the supply chain.
- Ran SQL-based data validation and KPI analysis on inventory and supplier performance, producing recurring business reports used for supply-chain monitoring.
- Profiled and optimized backend endpoints and executive briefing generation, improving API response efficiency for high-traffic queries.
- Deployed backend services on Render and documented all endpoints with Swagger/OpenAPI, collaborating within a small engineering team using Git/GitHub.

PROJECTS

CareerLens-AI — AI-Powered Resume Analysis & Job Recommendation Platform

Tech Stack: Python, FastAPI, PostgreSQL, SQLAlchemy, Pandas, Power BI, Scikit-learn, Git

- Architected a modular FastAPI backend using a Repository–Service pattern to keep REST APIs scalable and maintainable.
- Built a Resume Analysis Engine with PDF/DOCX parsing and automated technical-skill extraction from unstructured resume text.
- Implemented a Job Matching Engine that scores resume-to-job compatibility and surfaces skill gaps, backed by PostgreSQL databases and SQL analytics on job market data.
- Built interactive Power BI dashboards analyzing 1,025+ job postings across 620 companies and 356 locations to surface hiring trends, top companies, and recruitment sources.
- Shipped REST APIs for analytics, job search, and AI-powered recommendations, fully documented with Swagger.

EDUCATION

Bachelor of Technology (B.Tech) — Expected Graduation: 2027

The Apollo University | CGPA: 8.6 / 10

CERTIFICATIONS

- Corporate Simulation Internship — Data Analytics, Skillvance Technologies
- Python, SQL & Power BI Certification, Code With Harry
